Project Title	Global Fuel Prices and Taxation Analysis (2020 to 2026)
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	Develop an interactive Tableau dashboard containing 9 visuals that helps policy consultants, supply chain managers and researchers compare fuel prices, taxes and subsidies across 84 countries from 2020 to 2026.
Scope	Covers petrol, diesel and LPG prices, tax percentage, subsidy level, region and income level in one CSV dataset. Includes 9 visuals in three scenario rows, a year filter, click-to-filter, and written insights. Does not include live data feeds or price prediction beyond a simple diesel forecast.
Problem Statement	
Description	Fuel price, tax and subsidy data sits in 27,468 weekly records. Without summary views, users cannot compare regions, track trends or link income level to tax and subsidy.
Impact	Solving it gives policy makers evidence for fair tax and subsidy design, helps logistics teams lower fuel cost and plan purchases, and lets researchers publish clear findings on income and fuel pricing.
Proposed Solution	
Approach	Load the CSV into Tableau, set data types and geographic roles, create calculated fields (Subsidy Score, Avg Fuel Price, Diesel Volatility), build 9 sheets for three scenarios, combine them into one

	dashboard with filters, and include concise findings for every scenario .
Key Features	Tax map; tax vs subsidy and subsidy vs price comparisons; diesel forecast; top and bottom 10 countries; volatility heatmap; tax, subsidy and price by income level; year filter and click-to-filter across sheets.

Resource Requirements

Resource Type	**Description**	**Specification/Allocation**
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Standard laptop or PC with a 4-core CPU (no GPU needed)
Memory	RAM specifications	8 GB RAM
Storage	Disk space for data, models, and logs	Under 1 GB free (dataset is about 2 MB, plus the Tableau workbook)
Software		
Frameworks	Python frameworks	Tableau Desktop for the dashboard; Chart.js for the web version
Libraries	Additional libraries	pandas and matplotlib for data checks and diagrams
Development Environment	IDE, version control	Tableau Desktop, Python 3 and a code editor
Data		
Data	Source, size, format	global_fuel_prices_Dataset.csv; 27,468 records, 84 countries, 7 regions, 2020 to 2026; CSV format
